

The ARTiSAN Ada Synchronizer

Whether reverse engineering legacy Ada code into Real-time Studio, forward generating Ada source code, or visually differencing the model and the Ada source code... Real-time Studio's Ada Synchronizer is the only tool you'll need.

The ARTiSAN Ada Synchroniser reverse engineers and forward generates Ada-83, Ada-95, and SPARK and can be customized to generate any style of Ada imaginable. It's no coincidence that the leading developers of safety-critical systems and software are standardizing on Real-time Studio.

“Real-time Studio differentiated itself with its extremely intuitive and customizable interface. It is very flexible in supporting four variants of Ada.”

System Architect, Goodrich Engine Controllers
