

 **Martin Baker** Photo: An MK10L ejection seat being tested under zero zero zero conditions from an AMX-T cockpit-section.

**Ada won't let you down.
(Unless that's what you want.)**

Ada has become the preferred language for safety critical applications because of its proven reliability and sustainability. In addition, AdaCore's customers have benefited from our Ada 95 technology for nearly 10 years. Our commitment to quality software development and passion for Ada inspire us to create tools like GNAT Pro, the most powerful and complete Ada development environment on the market. But excellent tools are only half our story. Our online engineers will also do everything necessary to ensure your project will succeed brilliantly – and quickly, because the last thing we want is to leave you hanging. **For more information, contact AdaCore for the tools and services you'll need for your next Mil-Aerospace project.**
